Rabin Avidan

Automation Team Lead | AI-First Quality Engineering | Hands-on Leadership & Automation Architecture

Rabin.Avidan.dev@gmail.com | GitHub | LinkedIn

PROFESSIONAL SUMMARY

AI-First, hands-on Automation Team Lead with 10+ years in automation development. Promoted in 2024 to lead automation engineers and QA professionals in matrix teams across Israel, USA and India. Stay close to the code while mentoring engineers, planning delivery, reviewing designs and setting practical engineering standards.

Own QA strategy, risk-based coverage and Shift-Left practices across the SDLC. Work closely with Product, R&D, Architecture and DevOps to turn requirements into test plans and reliable automation for Web applications, REST APIs and microservices. Use TypeScript, Python and Java, with CI/CD quality gates, clear KPIs and AI tools that support test development and failure investigation.

PROFESSIONAL EXPERIENCE

ZoomInfo | 2020 - 2026

SalesOS: GCP cloud-native B2B SaaS platform with Web applications, APIs, **microservices** and **asynchronous** data workflows.

Environments: **Staging, Regression, Preprod and Prod** running on **multi-node Google Kubernetes Engine (GKE) clusters**.

QA & Automation Tech Lead | Matrix Management | 2024 - 2026

- **Team leadership and delivery:** Lead automation engineers and manual QA professionals across Israel, USA and India. Mentor engineers, plan and assign work, review code and coordinate delivery across several Agile teams.
- **QA strategy and architecture:** Own the automation strategy for Web applications, REST APIs and backend microservices. Lead architecture and design reviews, identify technical risks and build reusable infrastructure, frameworks and shared quality tools.
- **Generative AI and agentic workflows:** Embed AI Agents, MCP servers and LLM workflows into test development, failure analysis and regression classification. Build MCP integrations with Jira, TestRail and Slack for defects, test cases, results and failure alerts.
- **Quality ownership and KPIs:** Defined coverage, stability and release-readiness **KPIs**; built automation-health dashboards and tracked trends in **Datadog** and **Allure** to support release decisions.
- **Planning and Shift-Left:** Translate Product requirements and Jira Epics into User Stories, Sprint Plans and automation tasks. Work with Agile/Scrum teams throughout the SDLC, from early planning through release.

Senior Automation Engineer / SDET | 2020 - 2024

- **Playwright and TypeScript:** Developed a hybrid framework for Web UI, REST APIs and **E2E user journeys**; injected API setup and validation into browser flows to cut execution time by **50%**.
- **API and microservices:** Validated asynchronous microservices workflows, feature flags and test-data isolation. Built shared API clients, fixtures, utilities and JSON mocks.
- **Reliability and diagnostics:** Reduced flaky failures by **~85%** and release validation by **70%** through parallel execution and resilient synchronization. Investigated Playwright Trace Viewer timelines, API traffic, **Datadog** and **Kubernetes logs**.
- **CI/CD and quality gates:** Built GitHub Actions workflows for pull requests, sanity checks, nightly runs and regression testing. Connected Allure reporting and automated quality gates to release validation, with earlier experience in Jenkins and TFS/Azure environments.

Samsung | Automation Engineer | 2017 - 2020

OTA software platform for Linux-based automotive ECUs, IoT and mobile devices.

- Built **Java** automation for backend/API and system validation using **REST Assured, JUnit**, JSystem, Selenium and Cucumber; created service stubs and JSON mocks.
- Tested distributed backend-to-device workflows, failure and recovery scenarios on **Linux**; used Grafana for monitoring and troubleshooting.

- Developed **JMeter** load and performance tests, integrated regression suites into **Jenkins CI/CD** and validated delivery flows through **AWS CDN**.

iMDsoft | Automation Engineer | 2014 - 2017

- Developed **mobile and desktop automation** using **Appium, C#, Coded UI Test and Ranorex** for clinical systems.

NCR | QA Automation Integration | 2012 - 2014

- **Validated POS payment flows, credit-card transactions and payment processing** across integrations between terminals and backend services in an enterprise environment.

CORE SKILLS

Leadership and quality: Hands-on team leadership, Matrix Management, mentoring, task planning, delivery ownership, architecture and design reviews, code reviews, QA strategy, test plans, KPIs, Agile/Scrum, Jira and Shift-Left.

Automation and test design: Playwright, pytest, Selenium, REST Assured, JUnit, TestNG, Cucumber/BDD; Test Pyramid, API, integration, component and E2E User Journey testing; mocks and fixtures.

Programming: Java, Python, TypeScript, JavaScript and C#; API clients, reusable libraries, automation infrastructure and design patterns.

CI/CD, Cloud and infrastructure: Git, GitHub Actions, Jenkins, TFS, quality gates, Docker, Kubernetes, GKE, Linux, Shell, parallel execution and sharding; GCP, AWS and Azure.

Data and diagnostics: PostgreSQL, MongoDB, Redis, Kafka, Pub/Sub, SQL, Swagger/OpenAPI; Datadog, Grafana, Allure, Playwright Trace Viewer, JMeter.

Generative AI and engineering tools: AI Agents, agentic workflows, MCP servers, LLM workflows, Codex, Cline, Claude Code, GitHub Copilot, LangGraph, RAG, Akeyless and Applitools.

SELECTED PROJECTS

TestFlow | Test Case Management | Live Demo

- Built **FastAPI microservices** with PostgreSQL/Redis, Docker/Kubernetes and Terraform-provisioned monitoring; designed unit, component, API-contract and E2E coverage with pytest, Playwright and REST Assured.
- Built **CI/CD agents** for failure diagnosis, regression classification and flaky-test tracking; added AI-assisted test generation, an LLM critic/drafter workflow, a coverage gate and release-readiness dashboard.

EDUCATION AND CERTIFICATIONS

B.Sc. Electronic & Computer Engineering - AFEKA / Tel Aviv University Branch
Backend Java: Microservices, REST APIs, Spring Boot | Frontend: React / ES6 / JSX
MCSD: ASP.NET / MVC | Automation: Appium, Electron, Winium | ISTQB
